Columns : 2, 4, 8, 10, 12, 14 : Regional aggregates are UN Women calculations from estimates published in UN DESA (United Nations Department of Economic and Social Affairs) Population Division. 2017. World Population Prospects: The 2017 Revision, DVD Edition, accessed on 5 April 2019.

Columns : 6 : Regional aggregates are UN Women calculations from estimates published in UN DESA (United Nations Department of Economic and Social Affairs) Population Division. 2018. World Urbanization Prospects: The 2018 Revision, Online Edition, accessed on 5 April 2019.

Columns : 16, 18, 20, 22 : ILO. 2018. Care Work and Care Jobs for the Future of Decent Work. Geneva: ILO.

Notes:

-Total population: De facto population (both sexes) at mid-year.

-Percentage urban: Percentage of de facto population (both sexes) at mid-year residing in urban areas.

-Total fertility rate: Average number of live births a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality. Regional and global averages weighted by the total number of women of reproductive ages (15-49) at the beginning of the five-year period.

-Life expectancy at birth: Average number of years of life expected by a hypothetical cohort of individuals who would be subject during all their lives to the mortality rates of a given period. Regional and global averages weighted by the total number of births over the same five-year period.

-Care dependency ratio (CDR) - Children aged 0-5: Ratio of the number of persons aged 0-5 years old (care recipients), divided by the number of persons aged between 15 years and the healthy life expectancy age at 60 years minus 6 years of age (potential care providers) multiplied by 100. Regional and global averages weighted by the number of persons aged between 15 years and the healthy life expectancy age at 60 years minus 6 years of age (potential care providers).

-Care dependency ratio (CDR) - Older persons: Ratio of the number of persons at or above the healthy life expectancy age at 60 years old (care recipients), divided by the number of persons aged between 15 years and the healthy life expectancy age at 60 years minus 6 years of age (potential care providers) multiplied by 100. Regional and global averages weighted by the number of persons aged between 15 years and the healthy life expectancy age at 60 years minus 6 years of age (potential care providers).

-Medium-variant projections are used for indicators relating to 2018, 2025-2030 and 2030.

-Global and regional averages shown in red and brackets should be treated with caution as the data coverage is below UN Women's threshold (at least 50 percent of countries and/or 66 percent of the population covered).

-Hyphen (-) indicates country data are not available or regional/world average is not applicable or cannot be derived.

a : Regional averages calculated by UN Women. Global average from UN DESA 2017
